**Safety Advice**

## **Attention!**

In some countries you may need a permit when you want to set up an arched storage tent or storage shelter of a certain size – normally larger than 50 m<sup>2</sup>. It is your responsibility to comply with local rules and regulations and to ensure that the storage tent is assembled correctly according to the enclosed manual. It is very important that you assemble all parts according to the instructions and fasten the arched storage tent to the base in a safe manner. Do not skip any parts or any steps.

## **Weather conditions and Safety Packs**

Never set up an arched storage tent in bad weather or when it is windy. Check the weather forecast before you start setting up the structure. In case of bad weather conditions, it is your responsibility to ensure that the arched storage tent is safely secured, so the structure cannot cause damage to persons, buildings, and more.

Use storm straps and ground pegs – or other solutions - to secure the structure whether it is going to be in use for a short or long period. Do not use open fire, welding equipment or other sources, which can ignite, inside or close to the storage tent. Never stay inside the arched storage tent during extreme weather conditions!

## **Arched storage tents are temporary structures**

All our arched storage tents are temporary structures intended for interim storage only. In short, they are strong and sturdy structures, which will provide shelter for your stored things, but our arched storage shelters are not permanent buildings so it is up to you to secure the structure and currently make sure that the structure is safe and in good condition. It is especially important to retighten the roof cover 1 month after having erected your storage tent. Please note that our arched storage tents may not have been tested for snow and wind loads. We always recommend that you remove snow from the roof.

Furthermore, you should regularly check and retighten all assembly points of your arched storage tent. The roof cover of your storage tent must always be taught to withstand various weather conditions.

## **Insurance**

Make sure to check whether your arched storage tent is covered by your insurance or similar.

## **Attention to snow and rain**

In the event of snow always be sure to remove snow from the roof of the structure regularly to prevent snow from building on the roof as heavy snow may cause the arched storage tent to collapse.

In the event of rain, there is a risk of water assembling on top of the arched storage tent. Heavy puddles of water may cause the arched storage tent to collapse. It is your responsibility to ensure that water do not assemble on top of the tent by keeping the cover taught at all times and remove water if it assembles anyway. Make sure that the cover is stretched out properly over the frame all the time.

**Condensation inside your arched storage tent**

You may experience condensation inside your arched storage tent. Temperature changes and moisture in the air can cause dew or condensation to appear outside and inside an arched storage tent. This is normal and does not mean the tent is leaking.

Do not unpack or repack your arched storage tent in temperatures below zero as it may cause the cover material to break or get damaged. If you have to work with the arched storage tent in sub-zero degrees, you must pack the tent indoors. You also have to make sure that the tent/shelter is completely dry before folding it together or you may risk that mildew will develop while the cover is in storage.

**Warranty information**

Dancover warranty applies only to the normal use of the product, normal wear and tear excepted, in accordance with written use instructions or manual. The warranty does not apply to damage caused by accident, abuse, misuse, or modification of the product. If you need to clean the cover of your arched storage tent at some point, only use a mild detergent and lukewarm or cold water. Do not use strong agents of any kind.
